THE PENNSYLVANIA STATE DATA CENTER PROGRAM

PENN STATE • HARRISBURG

THE CONCEPT

The Pennsylvania State Data Center (PSDC) Program has been established to improve access to and use of statistical resources available from the United States Bureau of the Census and other sources. Census Bureau products that can be accessed through this PSDC Program include all major statistical programs covering such areas as: population, housing, agriculture, manufacturing, retail and wholesale trade, governments, etc. Data are generated in printed reports, microfiche, and computer files. Information and services are available through the PSDC office at The Pennsylvania State University At Harrisburg, The Capital College, the Pennsylvania State Library, or through the network of Affiliate Data Centers (ADCs) located across the Commonwealth.

THE PENNSYLVANIA STATE DATA CENTER

Data Products and Services

The PSDC located at The Pennsylvania State University At Harrisburg, The Capital College will provide products and services to any interested user. State agencies, local governments, businesses, nonprofit organizations, or researchers may all obtain information housed and generated by the PSDC. Costs incurred by the PSDC in providing products and services will be charged to the user.

Products and services available through the PSDC are:

- Census Bureau printed reports and microfiche
- Census Bureau reference maps
- PSDC printed reports
- Consultation on data availability and use
- Computer tape processing
- Demographic and geographic profiles
- Research survey processing and analysis
- Statistical mapping and geoprocessing
- Downloading of information onto microcomputer diskettes
- Zip code profiles
- Population Estimates and Projections

Training and Information

The PSDC facilitates education and training in the use of statistical resources by participating in conferences, workshops, and training courses throughout the state. The PSDC also publishes a periodic newsletter about user services and new statistical products.

If you would like information about training sessions or would like to receive copies of the newsletter please contact the Pennsylvania State Data Center at (717) 948-6336.

The Center

The PSDC is prepared to assist you in meeting your data and information needs. The center is open daily from 9:00 a.m. to 5:00 p.m. For information, please contact:

PSDC STATISTICAL GRAPHICS

I. INTRODUCTION/HIGHLIGHTS

This report represents the culmination of the first phase of the development of the Pennsylvania Population Projections and Estimates System. The report is presented in two volumes.

Volume I: Pennsylvania Population Projections, 1980 to 2000

Volume II: Pennsylvania: Fertility, Mortality, and Migration Working Papers

The Pennsylvania Population Projections and Estimates System (PPPES) is being developed to provide the population information necessary to meet the needs of various decisionmakers within the Commonwealth. The development of the system has been scheduled to occur in two phases over a three-year period. The objective of the first phase was to produce a set of county level age-sex and race specific population projections for use by state agencies, local governments, and private businesses. The second phase (1/1/86 - 6/30/87) will be devoted to the enhancement of the Commonwealth's population estimates program and the complete integration of the PPPES into the State Data Center operation.

Baseline Projections vs. Forecast/Policy Goals and Estimates

The numbers in this report are projections, not forecasts, predictions or estimates.

A *projection* is the measurement of a future population that would exist if the assumptions of the method prove to be empirically valid. Projections may assume continuations of past conditions, revisions based on present conditions, or trended changes in these conditions. Therefore, there are a number of possible projections for any given population.

A *forecast*, on the other hand, is a judgmental statement concerning an expected population projected under certain types of future scenarios of economic or social conditions. All forecasts are projections, but not all projections are forecasts

An *estimate* refers to a current population. Estimates are calculated from administrative records in lieu of an actual census count and are used to update population figures of the last census.

The projections in this report are not to be interpreted as policy goals. They are not intended to constrain or to advocate specific levels of growth in this state or any of its counties. Rather, they are based primarily on identifiable demographic secular trends which have been implicitly or explicitly incorporated into the model. The greatest value of projections is as a reference point for planning, policy evaluation, the consideration of alternative public or private intervention activities, and the formulation and management of programs developed to deal with particular situations.

Major *assumptions* used in this set of projections follow:

- Fertility rates in Pennsylvania are expected to increase slightly from 1980 to 1990 and then remain stable until 2000
- Projected survival rates from 1980 to the year 2000 show a clear pattern of improvement for all sex-race groups in Pennsylvania
- Annualized Net migration out of Pennsylvania is expected to decline in the 1980 - 2000 period.
- Some anticipated county net migration patterns include:

    continued high rate of in-migration to Pocono area counties

    reduction in the rate of net in-migration to suburban Philadelphia counties

    rapid reduction in the net out-migration rates for Allegheny and Philadelphia counties

The results from the projections model follow from the documented assumptions about trends in fertility, mortality and migration for the state and counties. Since future policy changes can not be predicted it is important to caution that the opening or closing of plants, the initiating of new housing developments, the alteration of institutional populations, and other social and economic changes may affect long term population trends, particularly in smaller counties.

Highlights

- Pennsylvania's total population is projected to increase by about two percent between 1980 and 1995 and then remain stable to the year 2000.
- The state's non-white population growth is pro

jected to outpace white population growth by four percent over the next twenty years.

- The number of children under age 5 is projected to increase by nearly thirteen percent between 1980 and 1990 but decrease by about the same percentage between 1990 and 2000, as the smaller number of women born in the 1970's reach childbearing age.

- The number of elementary school age children 5-14 years old is projected to decline between 1980 and 1985 by about eleven percent and then increase by nearly seven percent between 1985-2000.

- The high school and college age population 15-24 years is projected to decline by over thirty-one percent between 1980 and 1995 and remain relatively stable to the year 2000. Approximately eighty-five percent of the population decline is due to the lower number of births in the 1970's compared to the baby boom period of 1955-65.

- The labor force age population aged 20-64 is expected to increase from 6.77 million in 1980 to 7.02 million in the year 2000.

- The population aged 65-74 is projected to increase by twelve percent during the 1980's but then decrease by nearly the same percentage during the 1990's when the low birth cohorts of the depression era reach retirement age.

- The age group 75 years and over is projected to increase by sixty-three percent between 1980 and the beginning of the 21st century.

- Forty three counties are expected to continue to increase in population through the 1970-2000 period while ten counties are expected to continue to decrease in population between 1970-2000. Fourteen counties are expected to change from the observed increase in population 1970-80 to declining population in the 1980-2000 period.

- The rate of growth of Pennsylvania's nonmetropolitan counties is expected to continue to outpace the growth rate of metropolitan counties by five percent between 1980 and the year 2000.

II. PENNSYLVANIA DEMOGRAPHIC TRENDS TO THE YEAR 2000

Trends in population change are a major consideration in determining future economic development and human needs for the state of Pennsylvania. A major goal of economic development is to match people with jobs, while a goal of human services is to address the needs of a changing population. In both cases an understanding of future demographic trends is fundamental to sound planning and resource management in Pennsylvania.

This report highlights some of the major demographic trends projected for Pennsylvania and its counties to the year 2000. The data are from the Pennsylvania Population Projection and Estimate System developed for the Commonwealth by the Population Issues Research Center and Pennsylvania's State Data Center at The Pennsylvania State University. Detailed findings of the research team follow.

State Population Growth to the Year 2000

The total population of Pennsylvania is projected to increase by about two percent from the 1980 census figure of 11,863,895 to approximately 12,100,000 by the year 2000. The growth rate is expected to be somewhat higher in the latter part of the 1980's but decline to near zero growth in the late 1990's when the smaller birth cohort of the "baby-bust" generation of the 1970's reaches childbearing age.

White and Non-White Population Growth Trends

In 1980, the non-white population in Pennsylvania (Black and Asian groups) totaled 1,134,533 or just over 9.5 percent of the Pennsylvania population, while the white population constituted 90.5 percent of the population. By the year 2000 the non-white population is expected to increase to over 1,328,000 or nearly 11 percent of the Pennsylvania population.

As shown in Figure 1, the percent change for the white population between 1980 and 1985 was near zero while the percent change of the non-white population was over 4 percent.

By the 1995 to 2000 period, the white population in Pennsylvania may actually be declining while the increase in the non-white population is projected to be about 3.5 percent.

Changing Age Structure

The near zero population growth in Pennsylvania portends an aging population structure in the state. As shown in Figure 2, by the year 2000 there will be a

ADDENDUM: The U.S. Bureau of the Census has released revised 1980 Census counts of total population for the following counties. Detailed characteristics of the revised totals are not available, therefore no attempt was made to incorporate the changes into the projection model:

Allegheny	1,450,195	difference from original count	110
Bucks	479,180	difference from original count	−31
Cumberland	179,625	difference from original count	1,084
Montgomery	643,371	difference from original count	−250
Westmoreland	392,184	difference from original count	−110
PENNSYLVANIA	11,864,751	difference from original count	856

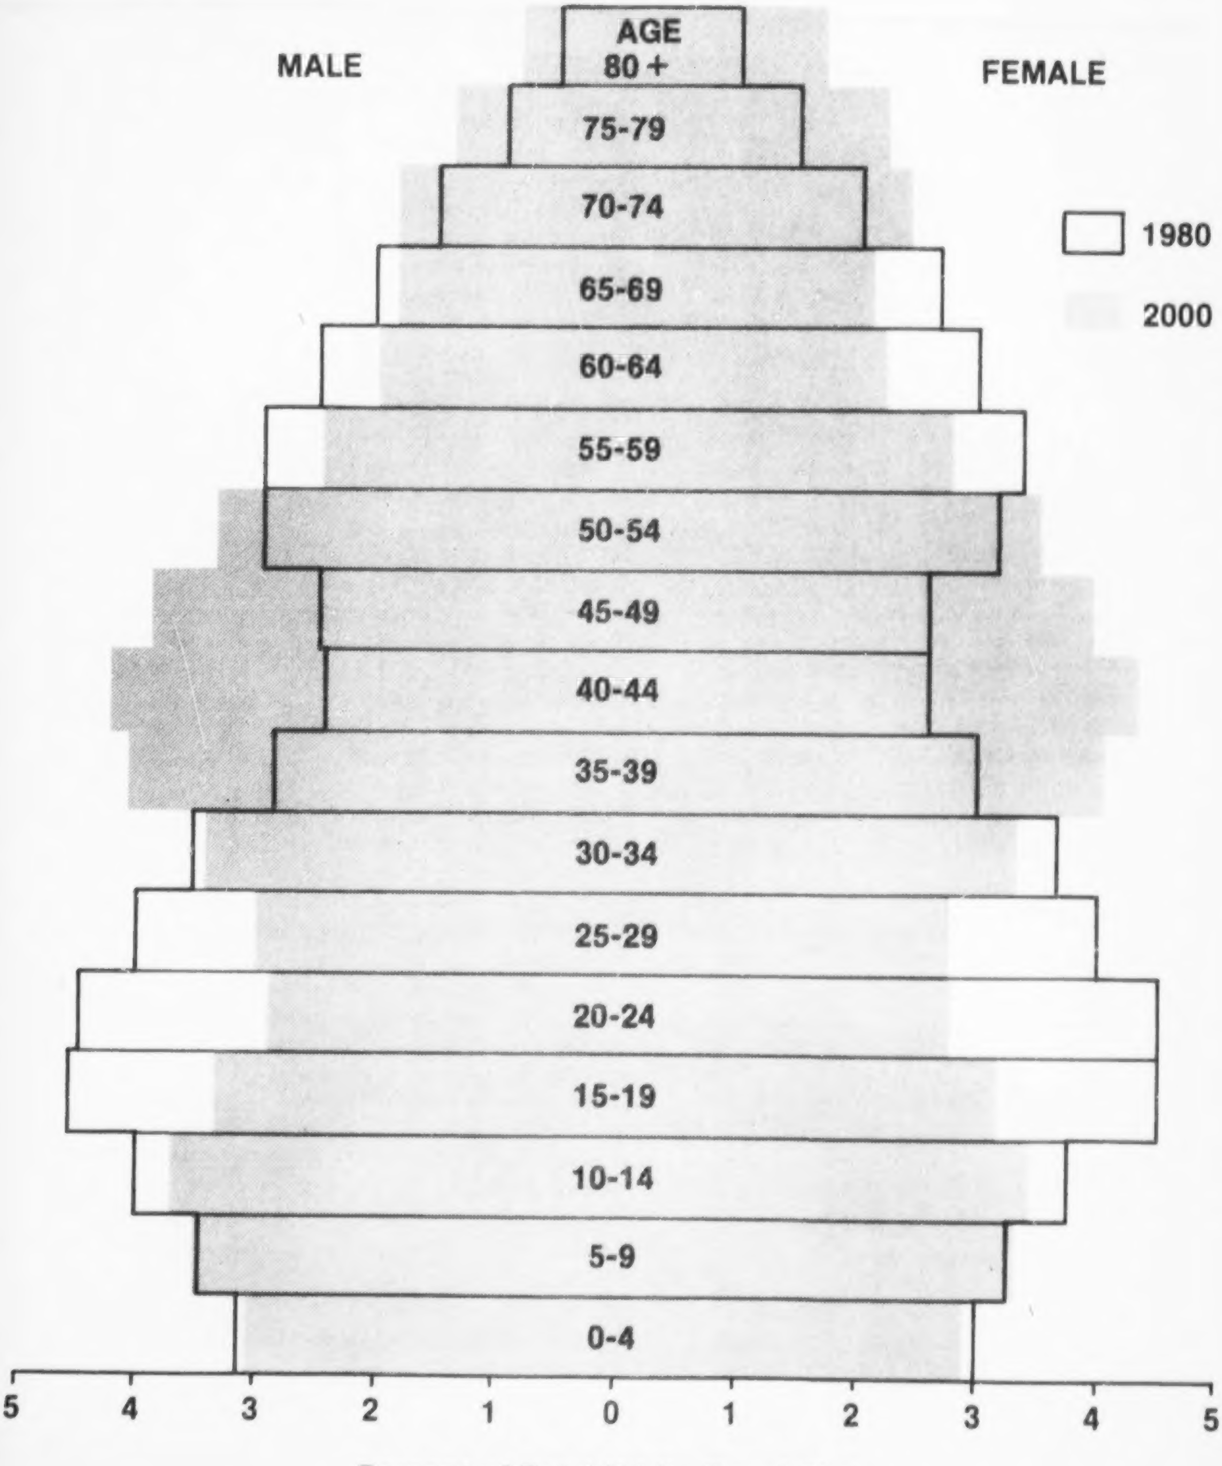
FIGURE 2

Age - Sex Structure of the White Population in Pennsylvania, 1980 and 2000.



higher proportion of white Pennsylvanians in the middle-age categories (e.g., 35-54) than in any of the children and teenage categories. The "baby-boom" generation, who in 1980 were in their 20's and early 30's, will have been replaced in the year 2000 by the "baby-bust" generation. This will significantly reduce the proportion of the white population in the 20 to 30 age group.

The increasing proportion of the state's population in the older age categories, particularly older women, is clearly a future trend in Pennsylvania.

While the non-white population (shown in Figure 3) follows the same general pattern as the white population, the higher birth rate of the non-white population results in a larger expected proportion of children and teenagers than is true for the white population.

Any economic development and human service planning which is targeted for specific age groups in the state will be markedly affected by the changing pattern of the state's age-sex population structure in the next few years.

Trends in the Elderly Population in Pennsylvania

As shown in Figure 4, the elderly population 65 years and over in Pennsylvania is projected to increase dramatically from the 1980 Census total of 1,530,933 to over 1,900,000 by 1995 before declining sightly between 1995 and the year 2000. This slight decline is due to the smaller birth cohorts of the early 1930's who will be reaching retirement age in the late 1990's.

The number of non-white elderly in Pennsylvania is projected to increase twice as fast (44 percent increase) as the number of white elderly (22 percent increase) between 1980 and 2000.

The most rapidly increasing segment of the elderly population will be those persons 85 years of age and over, where a 90 percent increase is projected for the white population and a 185 percent increase is projected for the non-white population between 1980 and 2000.

By the beginning of the 21st Century, it is projected that there will be over 255,000 Pennsylvanians 85 years of age and over.

Trends in the Children and Young Adult Populations

While Figure 4 shows that the number of children under age 5 in Pennsylvania is projected to increase from nearly 750,000 in 1980 to over 840,000 in 1990, by 2000 it is projected to again decline to approximately 730,000 young children.

The number of elementary school age children 5-14 years is projected to decline between the 1980 and 1985 period from nearly 1,750,000 to 1,500,000 (Figure 4). During the late 1980's the elementary school age population is projected to remain relatively stable before increasing to 1,665,000 by the start of the 21st Century.

The rapid decline in the 15 to 24 year old young adult population in Pennsylvania is dramatically illustrated in Figure 4. This high school, college, young workers age group which numbered 2,140,000 in 1980 is projected to decline by over 31 percent to 1,476,000 by 1995 and remain relatively stable to the year 2000. Approximately eighty-five percent of the population decline is due to the lower number of births in the 1970's compared to the baby boom period of 1955-65.

This dramatic decline in the number of young adults has marked implications not only for educational institutions in Pennsylvania, but also for the supply of young, highly trained workers for economic development changes from an industrial to a more high technology, information, service oriented economy in Pennsylvania.

County Growth Trends

The projected changing patterns of local area population growth can be seen by comparing the 1970 to 1980 annual county population growth rates in Map 2 with the projected 1980 to 2000 annual county population growth rates in Map 3. High growth areas in the 1970's included counties in the southcentral and southeastern part of the state, the Pocono area, and in the central part of the state corresponding to the route of Interstate 80. Declining population counties included most of the urban areas of the state. We must again caution that unanticipated social and economic changes can have a major impact on long term population trends particularly in small counties.

Between 1980 and 2000 it is projected that there will be fewer high growth counties in Pennsylvania (annual population growth rates of 10 per 1,000 or more). High growth counties during the 1980 to 2000 period are projected to be Wayne, Pike, Monroe, Bucks, Chester, Lancaster, Perry, Snyder, and Potter. On the other hand, counties projected to have a 1980 to 2000 annual population decline of 5 or more per 1,000 include Beaver, Allegheny, Philadelphia, Schuylkill, Luzerne, Sullivan, Lycoming, Cambria, Cameron and McKean.

and Budget, Pennsylvania's nonmetropolitan population is expected to increase by 6.2 percent between 1980 and 2000, compared to an expected increase of 1.3 percent in the metropolitan population. The more rapid population growth in nonmetropolitan areas was observed in the 1970-1980 period and is in part due to the rapid rate of population growth in the Pocono area of the state. Metropolitan population, which declined in many areas in Pennsylvania in the 1970's, is expected to increase but at a slower pace than the national rate for metropolitan areas.

Projected Level of State Net Migration

Pennsylvania has been and continues to be a net out-migration state. However, the level of net out-migration has declined continually over the last 35 years, from an annual average of -47,500 in the 1950's, -37,900 in the 1960s, -35,160 in the late 1970s, and -29,000 in the early 1980s. The population projections prepared for the Commonwealth assume that this remarkably regular pattern of decline in net out-migration from Pennsylvania will continue during the 1985-2000 projection period. The projection of the average annual number of net out-migration is -24,000 during the late 1980s, approximately -21,000 in the early 1990's, and about -19,000 for the period between 1995 and 2000.

Projected State Fertility Rates

Projected fertility rates for Pennsylvania from 1985 through 2000 are based on the ratio of the 1980 Pennsylvania to U.S. fertility differentials. These rates predict that the TFR (total fertility rate) for Pennsylvania will increase between 1980-2000 from 1.59 to 1.75 for whites and 2.05 to 2.08 for nonwhites. These rates show an increase in fertility among all white women in the 20-39 age groups and especially among the older child bearing age groups. None of these projected rates is above the comparable 1970 rates.

III. METHODOLOGY

Population projections for the Commonwealth of Pennsylvania and its 67 counties are presented in this report. The set of population projections was completed by the Pennsylvania State Data Center in cooperation with the Population Issues Research Center of The Pennsylvania State University. In this section, the approach used to develop the age-sex-race (white-nonwhite) population projections for July 1, 1985, 1990, 1995 and 2000 is briefly described. Projections of whites and nonwhites are prepared for 18 counties with a nonwhite population of greater than 5000 persons. For counties with fewer than 5000 nonwhites, population projections by age and sex are presented.

Demographic Cohort Model

The basic approach employed is a cohort-component demographic projection model. That is, the basic population is survived, using survival rates, five years in each iteration of the projection cycle and births are projected by applying fertility rates to survived females of childbearing age to determine the population due to natural increase. The survived population for each group is then adjusted for projected net migration by age-sex-race. The adequacy of this model depends on the accuracy with which the assumptions about future fertility, mortality, and migration reflect future demographic reality. The procedures used to make these assumptions are briefly described in the following sections.

Base Populations

The population counts for the projection model come from the April 1, 1980 U.S. Decennial Census. The base population includes Census Bureau modifications that make the race categories (white-nonwhite) consistent with U.S. Office of Management and the Budget and other vital statistics classifications, for the approximately 90,000 Hispanics in Pennsylvania who respond as "other" to the question on race in the 1980 census. The base population includes persons in group quarters as of April 1, 1980 and thus the projections describe the *resident population* of the state. No were made to correct for possible under or over enumerations adjustments of the census count because no defensible adjustment procedure for these inaccuracies currently exists.

Fertility Rates

The cohort component model requires that assumptions be made about future fertility. The assumption about future trends in state fertility is directly tied to the Census Bureau's middle series of projected age-specific fertility rates. State trending was based on a careful analysis of the historic relationship between national and Pennsylvania age-race specific fertility rates. The national series assumes the ultimate level of completed fertility will be close to 1.95 births per woman by the end of the projection period, 1.90 for white women and 2.29 for nonwhite women. This project's analysis showed that Pennsylvania's fertility rates have been consistently lower than those for the nation. Therefore, the projections incorporate rates that capture the unique pattern of lower fertility and delayed childbearing which lengthen the time between generations in Pennsylvania compared to the national pattern. Based on the above methodology, it is projected that by the year 2000 the total fertility rate will be about 1.80; 1.75 for white women and 2.08 for nonwhite women in Pennsylvania.

Projections of county patterns of fertility by race are based on a time-series analysis of the relationship between general fertility rates for counties and those of the state. The underenumeration correction factor prepared by the U.S. Bureau of the Census has been applied to nonwhite births. The sum of the county births by sex and race are adjusted to equal the projected state sex-race totals.

Mortality Rates

State and county age-sex-race specific survival rates are based on state life tables and projected survivorship "middle mortality assumptions" data provided by the Social Security Administration. The white and nonwhite survival rate schedules for Pennsylvania assumed a continuation of the historic relationship of Pennsylvania rates to national rates through the year 2000. No major medical development had been assumed in the model. Survival rates are applied to births and to each age cohort. Since county level variation in life expectancy in Pennsylvania is due primarily to local area differences in the age-sex-race composition of county populations, by using age-sex-race specific schedules the projection model assumes that state rates are applicable for counties.

Updated Census Estimates

As part of the revenue sharing program of the federal government, the Census Bureau releases annual estimates for the preceding year of the total population of states and counties. While this information provides no age-sex-race detail, it does give a relatively accurate picture of the most recent population changes. In this report the most recent U.S. Bureau of the Census population estimate (July 1, 1984) totals have been used as a benchmark for each county in the development of 1985 population projections.* This procedure improves the accuracy of the projections for the immediate future.

Migration

Unlike for fertility and mortality the Census Bureau does not project future patterns of net migration which are applicable to the local level. The migration rates used in this report are based on a thorough analysis of the unique age-sex-race-specific patterns of migration for the state and each county and on an analysis of trended changes in the level of migration.

Age-Sex-Race Migration Rate Pattern

In order to provide population projections by age-sex-race, it is necessary to have high quality migration rates for these population subgroups in the state and each county. The rates used in this report were derived from special tabulations of the question in the 1980 U.S. Census concerning place of residence on April 1, 1975. Net migration rates were calculated from this special census information as the ratio of net migrants to the survived population for each population subgroup in all 67 counties and the state. Although county net migration rates are trended, the 1975-80 age distribution of net migration rates derived from the special tabulations is held fixed throughout the projection period. To enhance the stability of age-sex-specific rates in smaller sized counties (less than 100,000 population), total age-specific rates as opposed to age-sex-specific rates were used. The comparative analysis of county age-specific migration patterns for 1965-1970 and 1975-1980 showed a remarkable stability in the age *pattern* of net migration rates.

Past, Present, and Projected Levels of State Net Migration

In addition to the age pattern of migration, the report's demographic projections are based on a thorough analysis of the *level* of net migration. As shown in Table 2, Pennsylvania has been and continues to be a net out-migration state. However, the level of net out-migration has declined continually over the last 35 years, from an average annual rate of -47,500 in the 1950s to -29,400 in the early 1980s. The population projections presented in this report assume that this remarkable regular pattern of decline in net out-migration from Pennsylvania will continue during the 1985-2000 projection period. The reduced level of net out-migration is consistent with the following trends in the determinants of migration: 1) the rapid reduction between 1985 and 2000 in the number of young Pennsylvania adults because of the smaller number of births in the late 1960's and 1970's (which will also reduce suburbanization in the years ahead), 2) the

reduction in difference between the economic activity level of Pennsylvania and other states, 3) the increasing significance of amenitites, such as the lakes and mountains found in some Pennsylvania counties, in residential choice decisions, and 4) the trend toward an increasing elderly population which has lower rates of out-migration and potentially significant return migration to the state. County net migration levels sum to the projected state totals presented in Table 2.

Projected County Patterns of Net Migration

Based on a detailed analysis of 1975 to 1980 and 1980 to 1985 net migration patterns derived from U.S. Bureau of the Census sources, the previously mentioned trends in the determinants of net migration, and on trends in group quarter populations; a typology of projected net migration patterns for counties was developed. This typology also utilized unpublished Internal Revenue Service administrative record data on yearly changes in total county net migration rates for the early 1980s. Based on the above analyses, counties were assigned to the following expected future migration typology categories: 1) continuing net out-migration rates, 2) slow reduction in net out-migration rates, 3) rapid reduction in net out-migration rates, 4) low and declining rates of net in-migration, 5) continuing low net in-migration rates, and 6) continuing high net in-migration rates (Map 4). The resulting expected number of migrants, derived from the trended migration rates for each of the projection years, were added to or subtracted from the survived population (see Daniel T. Lichter, et al., *Pennsylvania Migration: 1965-2000).*

Projection Procedure

In the projection process, first, the 1980 population is survived to 1985 using Pennsylvania's age-sex-race-specific survival rates. Second, the number of births is projected by applying fertility rates to the number of women in the childbearing age groups. Third, the number of net migrants in each age-sex-race group is added to or subtracted from the survived number of people in the respective groups. The resulting population figures then become the resident population base for the 1985 to 1990 projection cycle and the process is repeated (see Figure 5).

Future Plans

The Pennsylvania State Data Center plans to revise and modify these projections as more detailed census data becomes available and as sources of data are updated.

IV. PUBLIC REVIEW PROCESS

The PPPES population projections were produced in two steps: 1) the production and subsequent review of preliminary populations projections to the year 2000; and 2) the production of provisional year 2000 projections. The following narrative details the review process and the guidelines for the review of the projections by the Advisory Committee and the public.

An integral part of the development of the PPPES is the review and comment provided by the PPPES Advisory Committee. This committee is made up of individuals representing statewide interests and concerns. The members of the Advisory Committee during the review process were:

Pittsburgh, PA

The first step of the process was the production of preliminary year 2000 projections. The preliminary projections were then circulated by the project team to the Advisory Committee for their review.

The preliminary projections represented a working product of the PPPES project. As such they were not released by the project team to individuals or organizations for other than review purposes. In all instances, where these projections were provided to persons outside the Advisory Committee (either by the project team or the Advisory Committee) written assurance was to be obtained from the person receiving the preliminary projections that they were using the projections only for review purposes. Copies of the preliminary projections clearly indicated that they were for **"FOR REVIEW PURPOSES ONLY"**.

The purpose of the Advisory Committee review of this set of preliminary projections was twofold. The first purpose was to subject the projection methodology and assumptions to the critical scrutiny of the Advisory Committee. Secondly, the Advisory Committee review experience was used to formulate and finalize the steps in the statewide review of subsequent sets of projections.

The initial review and adjustment process that was used by the Advisory Committee follows:

August 8, 1985

1) The Advisory Committee received the preliminary year 2000 projections and a report which explained the projection methodology and assumptions in non-technical terms. In addition, this report stated that the projections are demographic current trend projections and can serve as a baseline against which forecasts (which contain economic assumptions or policy assumptions) can be compared.

2) The Advisory Committee was asked to review the projections and provide written comments

to the project team based on:

a. Evidence that birth, death or migration rates differ from those used in the model;
b. Argument and evidence that some aspect of the demographic model's assumptions or algorithms are likely to be less accurate than a stated alternative;
c. Evidence that the input data to the model is inaccurate and can be improved by using an available alternative data source;
d. Evidence showing that the projections are inaccurate, such as a local census count or estimate showing that the projected population has been over or understated.

3) The Advisory Committee was asked to review the report explaining the projections and provide their comments and suggestions to the project team. The comments were directed at the utility of the report to persons with limited training in demographic terms and concepts.

4) The Advisory Committee was asked to provide the project team with comments and suggestions on the review process.

September 13, 1985

The comments of the Advisory Committee members concerning items one through four above were submitted to the project team by September 13, 1985. The project team used these written comments to revise the preliminary projections.

November 8, 1985

The preliminary projections of county totals, and explanation of the methodology and assumptions, and the review guidelines were published in the *PENNSYLVANIA BULLETIN* (November 16, 1985) and the State Data Center's, *PSDC NEWS* (November, 1985). The text of the Notice of Public Review follows:

Pennsylvania State Data Center
Pennsylvania Population Projection and Estimates System

NOTICE OF PUBLIC REVIEW

The Pennsylvania State Data Center and the Population Issues Research Center at the Pennsylvania State University have produced preliminary state and county population projections for the Commonwealth of Pennsylvania. These preliminary projections are detailed by age, sex, and race (for counties with a 1980 non-white population over 5,000). Presented below are county totals from the 1980 Census and projections for 1985 to 2000.

The method of projection is a cohort-component demographic projection model. That is, the base population is survived five years in each iteration of the projection cycle and births are projected by applying fertility rates to survived females of childbearing age to determine the population due to natural increase. The survived population for each group is then adjusted for projected net migration by age-sex-race.

The detailed population projections and working papers relating to assumptions are on file and may be inspected and arrangements made for copying, at the Pennsylvania State Data Center as indicated below.

Persons wishing to comment on these preliminary population projections are invited to submit a statement to the Pennsylvania State Data Center, Pennsylvania State University/Capitol Campus, Middletown, PA 17057, 717/948-6336, within 30 days from the date of this public notice. All comments received within this 30 day period will be considered in the formulation of the final preliminary population projections. All responses should include the name, address, and telephone number of the writer and a concise statement to inform the Pennsylvania State Data Center the exact basis of any comment and the relevant facts upon which it is based.

December 20, 1985

The project team produced the provisional population projections to the year 2000. This set of projections incorporated the research efforts of the project team and the results of the Advisory Committee and public review.

Public Review Results

The comprehensive regional agency coverage provided an opportunity for each of the State's county planning agencies to participate in the development and review process.

Revisions were incorporated into the projection assumptions as a result of the comments made by the Advisory Committee and other agencies. The most significant of these comments related to the migration patterns in counties where there existed a high proportion of group quarters population (colleges, prisons, etc.).

AFFILIATE DATA CENTERS

The purpose of the Affiliate Data Center (ADC) network is to more directly meet the needs of local users. The ADCs maintain a publicly accessible collection of census materials and reports. They have personnel trained to assist data users in locating data items and are available for consultation. The ADCs provide a wide range of products and services on a cost recovery basis. Users are urged to direct requests for census information to their nearest Affiliate Data Center. The ADC will make referrals to the PSDC or another affiliate if it cannot handle your request.
